Dear Whomever this may concern,

I have recently come across an opening with your company for a Data Analyst intern role. I would like to briefly explain why I would be a good addition to your organization.

Currently I work at Sollers, an educational institute which specializes in Healthcare Analytics. I developed the first Data Science Bootcamp Cohorts as well as the Master's program and its landing pages. Every day, I come up with interesting projects for students such as a medical store application using MySQL, and NodeJS to store product information. I oversaw the landing pages for our programs which were created with outside developers using HTML5, CSS3, Bootstrap, Javascript, Jquery, etc. I started as a SAS intern last year and came back as a Data Science consultant after a project in Wall Street with FULLBEAUTY BRANDS.

I have also worked as a Statistical analyst in FULLBEAUTY BRANDS, a large retail corporation in the financial district of New York City. Many times I come up with reports to heads such as the Vice President of Marketing to see why sales are behaving a certain way, or come up with logistic models to predict customer behavior for special channels within brands. I used SAS Enterprise Guide with Proc SQL (SAS's procedure for SQL) mainly to work with tables across departments and come up with Marketing reports.

Currently I am a Web developer student at Rutgers University, using HTML5, CSS3, Javascript, NodeJS, and API's. I developed an application in my latest project which successfully identified pictures of flowers taken from Flickr account and general searches and outputted the correct information about the flower including the scientific name, and information from the Wikipedia API. I had a lot of fun coming up with a creative project and would like to get my hands dirty with more programming experience! I have also done many other projects such as a Calculator, a SIRI simulator, Train Scheduler, etc.

For the past few years, I have put technical terms into "Plain English" for customers/clients whatever the situation. I am flexible and detail oriented. With various experiences, I believe that my educational background and work related duties make me an ideal candidate for your organization. I am available at any time and you may call me anytime. I look forward to hearing from you. Thanks. Please see my web portfolio in the following link: https://amreeta-choudhury.herokuapp.com/

Sincerely,

Amreeta Choudhury
